

Final Exam Explanation

This controller uses 2 of my initials, H and C, to make a controller meant for a vertical bullet hell game, dodging projectiles from the top.

This controller receives input from 2 buttons on the 2 sides of the H, denoting left and right movement inputs. Additionally, the C is meant to hold lights (currently missing as I could not find one appropriately sized in time) to denote which key was pressed, as well as any damage taken by the player
